Sentinelasia communication system

- It is colesed among JPT and ADRC members.
- We can share the status by time seaquence

Lessons and learned

- Participants can get the operation status semi real time.

- However non registed end user cannot access the information because of member closed system.

- We found there are both of general and sensitive information.

Proposal

- We should separate communication system to public and internal.

- We adopt facebook like for general information to public, adopt a system just for members for the sensitive information.

Items to consider

- How we separate messages to each communication way in sentinelasia ?
- Do we need to adopt free service ?
- Opinions or Comments ?
