

Activities in Yamaguchi University for Data Analysis Node (DAN) in 2018

Presented by

Noppawan Tamkuan and Masahiko Nagai

6th JPTM for Sentinel Asia at Awaji Yumebutai, Awaji-island, Hyogo Japan

Disasters

Data analysis in emergency response phase by Yamaguchi university

Date	Disaster	Area
07 July 2018	Flood in Japan	Okayama, Hiroshima
23 July 2018	Flood in Laos	
26 July 2018	Flood in Myanmar	
29 July 2018	Earthquake in Indonesia	Lombok island
29 July 2018	Flood in Thailand	
05 August 2018	Earthquake in Indonesia	Lombok island
09 August 2018	Flood in India	
05 September 2018	Earthquake in Japan	Hokkaido
28 September 2018	Earthquake in Indonesia	Palu, Sulawesi

Water related disaster → flood, landslide

Earthquake related disasters → tsunami, liquefaction, landslides

Flood in Japan

Occurrence date: 7 July 2018

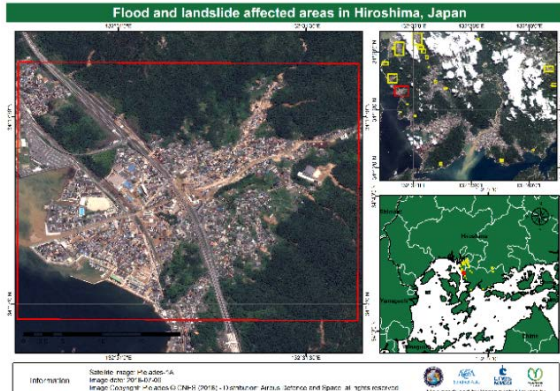

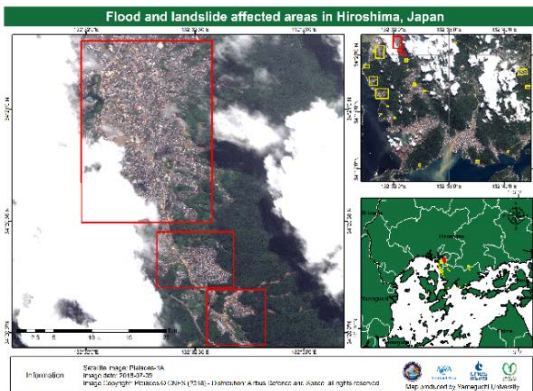

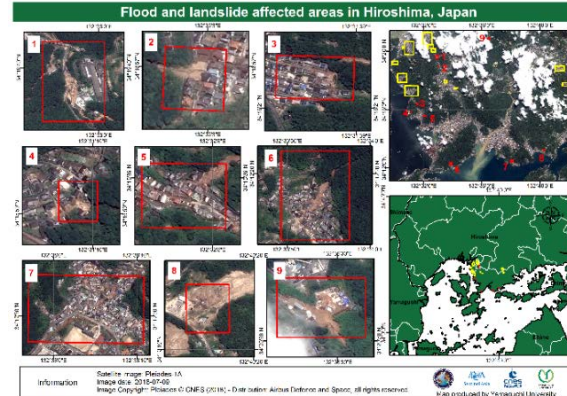

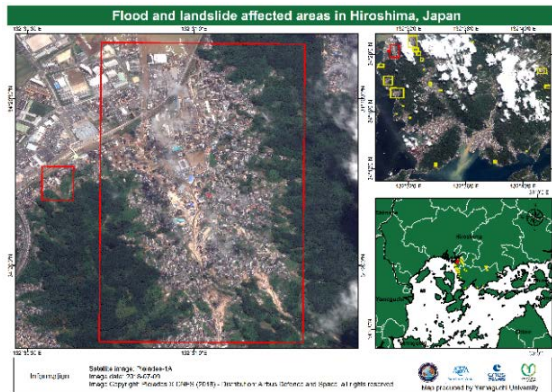

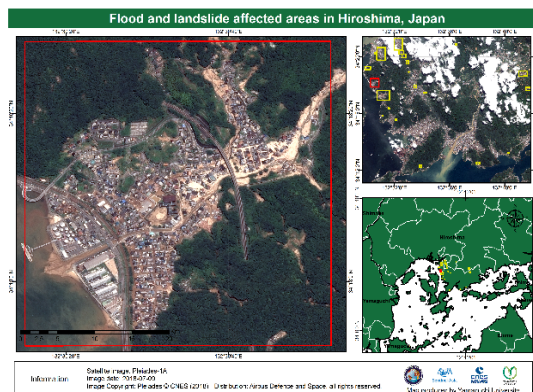

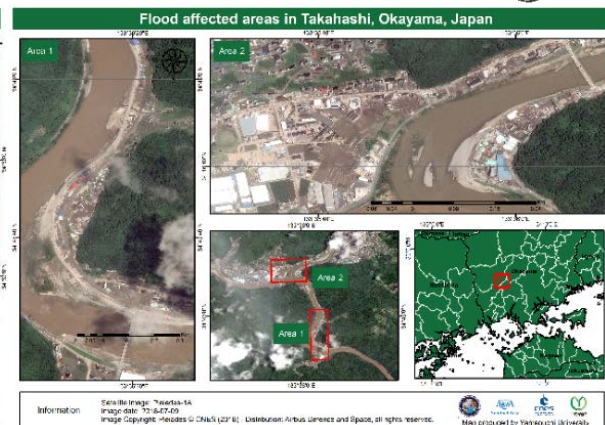

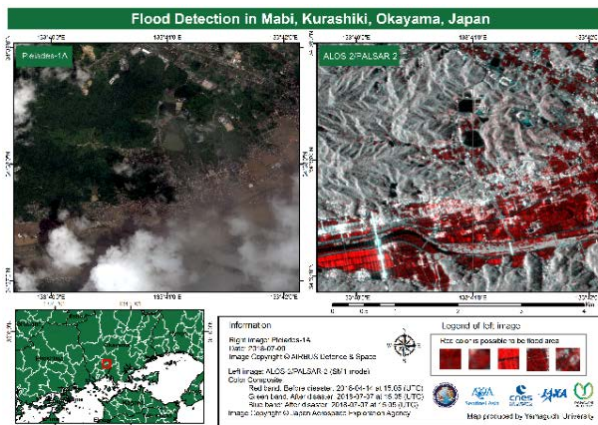

Input data:

ALOS-2 StripMap (SM1) on 7 July 2018
and 7 July 2018

Pleides-1A on 9 July 2018

Analysis method:

Before-after images color composite

Flood in Myanmar

Occurrence date: 23 July 2018

Input data:

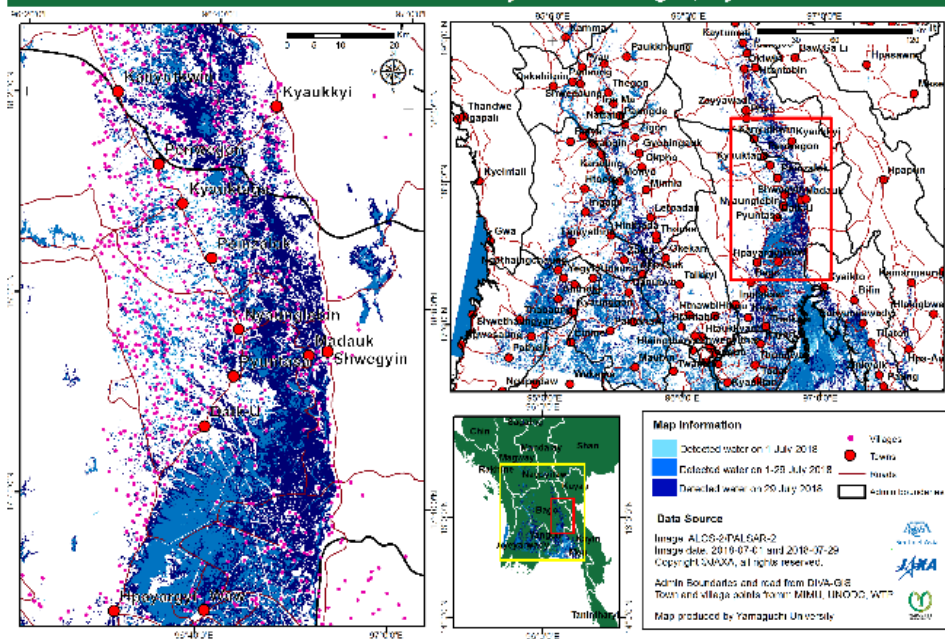

ALOS-2 ScanSAR on 29 July 2018 and 1 July 2018

ALOS-2 StripMap on 2 August 2018

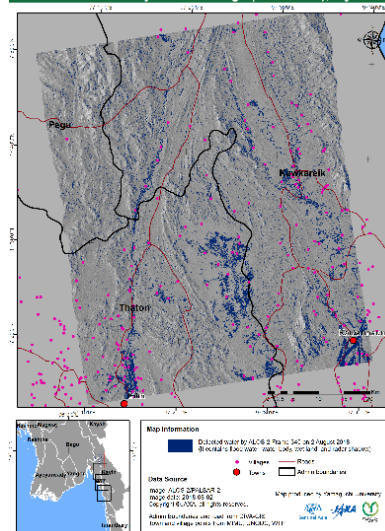

Analysis method:

- water detection by before- and during- flood images
- water detection by during flood image

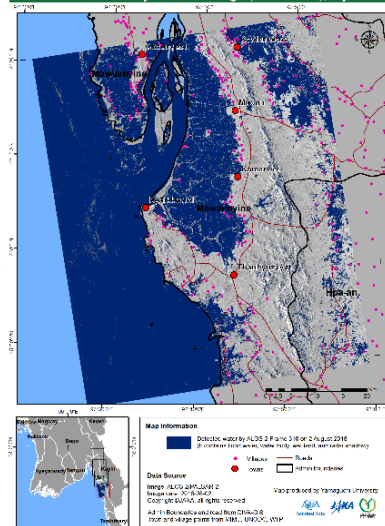

Area under water detection by ALOS-2 images, Myanmar

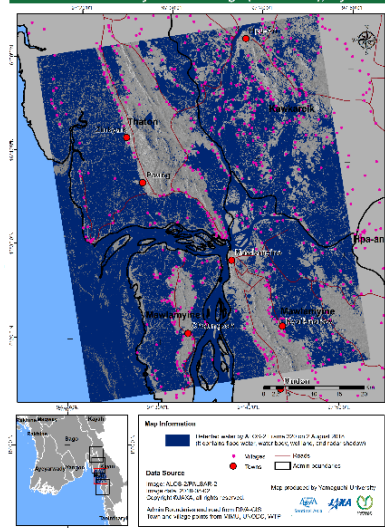

Area under water by ALOS-2 image (Frame 340), Myanmar

Area under water by ALOS-2 image (Frame 310), Myanmar

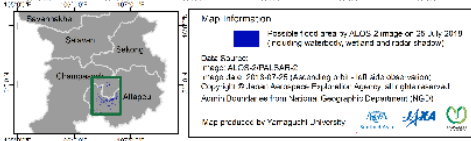

Area under water by ALOS-2 image (Frame 320), Myanmar

Flood in Laos and Thailand

Possible flood areas in southern part of Laos

Flood in Laos

Occurrence date: 23 July 2018

Information: dam collapsed

Input data:

ALOS-2 StripMap (SM1) on 25 July 2018

Analysis method: water detection by during flood image

Flood in Thailand

Occurrence date: 29 July 2018

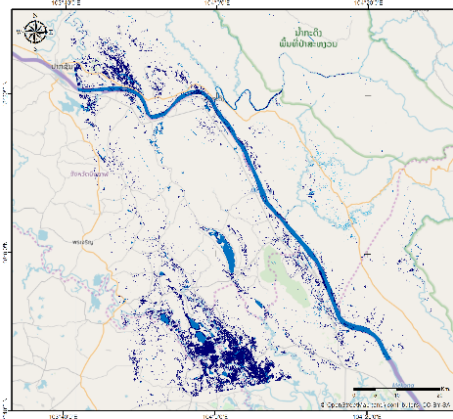

Input data:

ALOS-2 StripMap (SM3) on 10 August and 6 April 2018

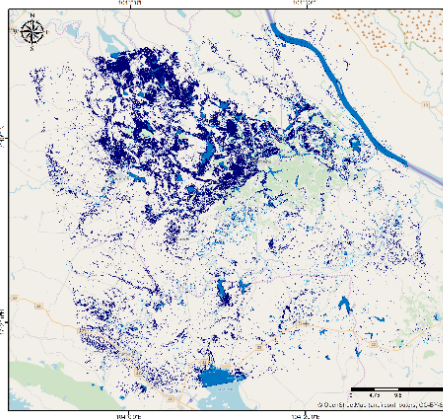

Analysis method:

- water detection by before- and during- flood images

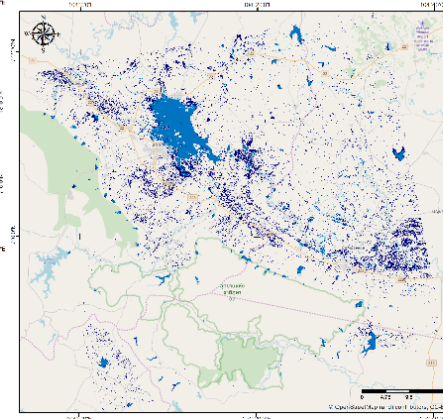

Area under water detected by ALOS-2 images (Frame 350-360), Thailand

Area under water detected by ALOS-2 images (Frame 340), Thailand

Area under water detected by ALOS-2 images (Frame 330), Thailand

Flood in India

Occurrence date: 9 August 2018

Input data:

Before ALOS-2 StripMap (SM3) on 7 April 2018

Before ALOS-2 ScanSAR (WD1) on 30 April 2018

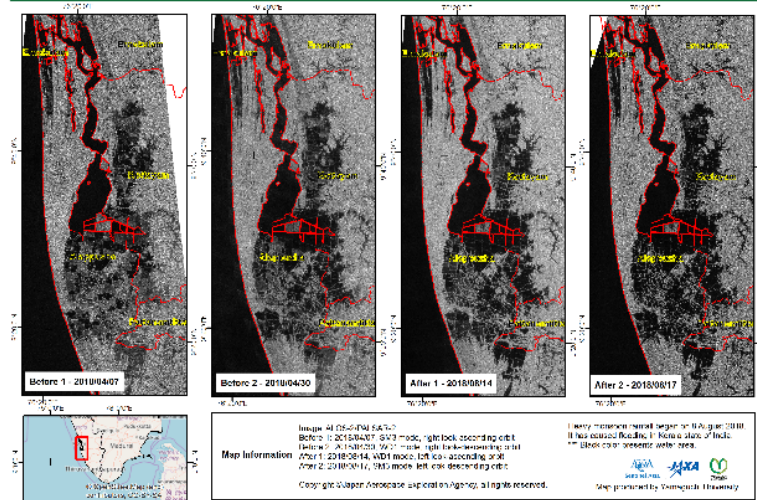

After ALOS-2 ScanSAR (WD1) on 14 August 2018

After ALOS-2 StripMap (SM3) on 17 August 2018

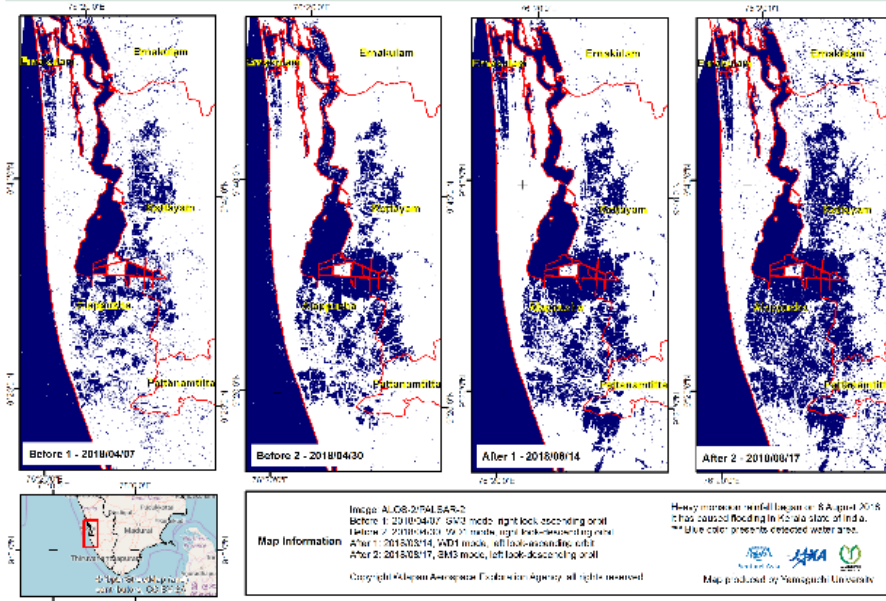

Analysis method:

- water detection by multi-temporal images

Area under water detected by ALOS-2 images in Kerala state, India

Area under water detected by ALOS-2 images in Kerala state, India

Blue: permanent water
Green: seasonal water
Red: flood water

Earthquake in Lombok Island, Indonesia

Occurrence date: 29 July 2018

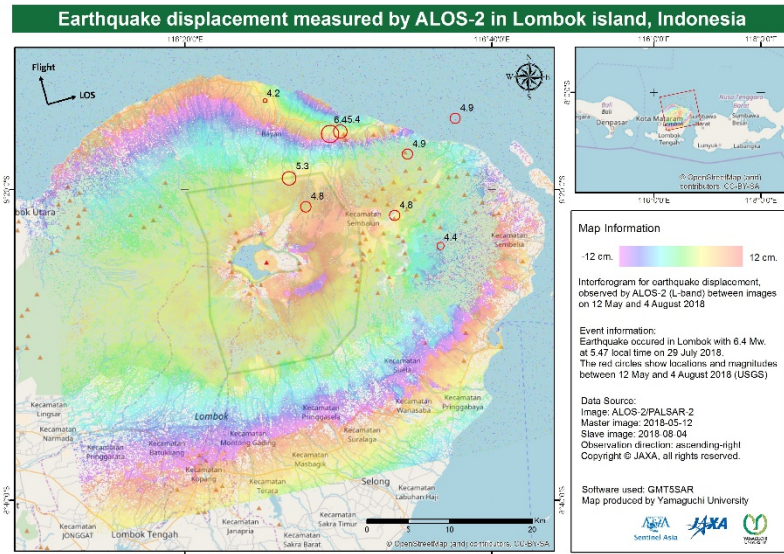

Information: 6.4 Mw.

Input data:

ALOS-2 StripMap on 4 August 2018 and 12 May 2018

Analysis method:

- Differential SAR interferometry (DInSAR)

Occurrence date: 5 August 2018

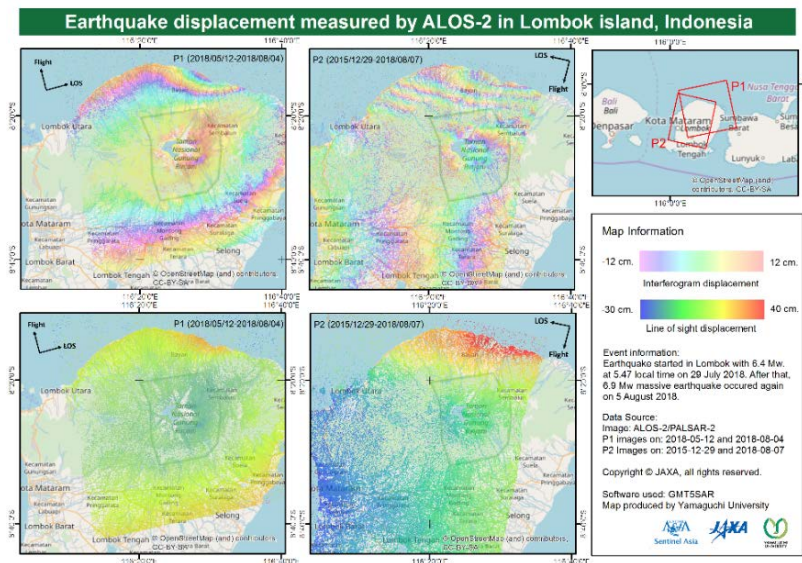

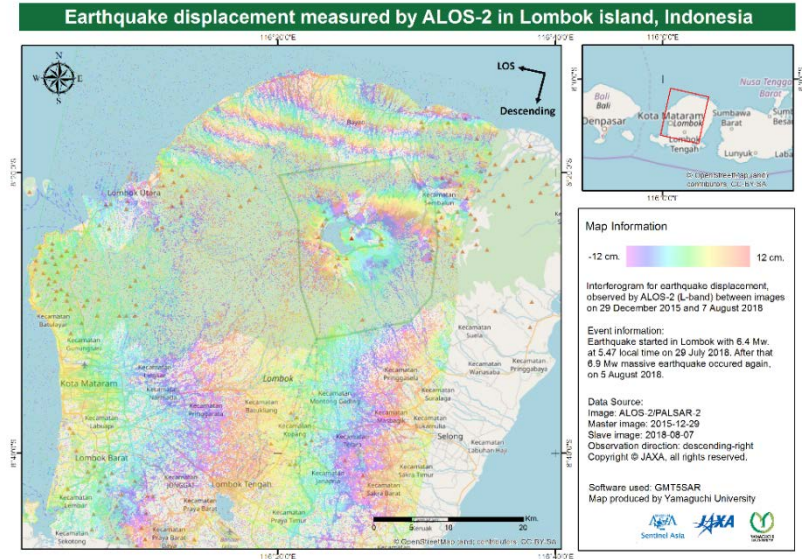

Information: 6.9 Mw.

Input data:

ALOS-2 StripMap on 7 August 2018 and 29 December 2015

Analysis method:

- Differential SAR interferometry (DInSAR)

Earthquake In Hokkaido, Japan

Occurrence date: 5 September 2018

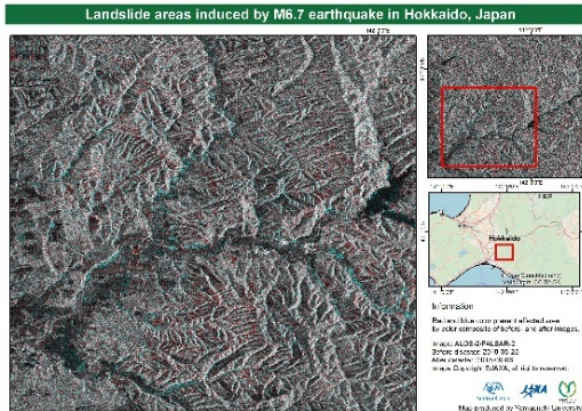

Information: 6.7 M

Input data:

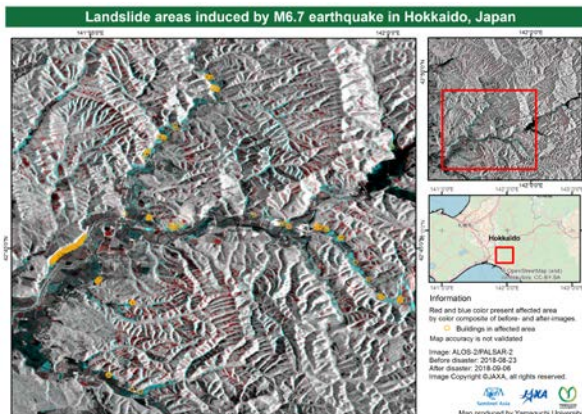

ALOS-2 StripMap on 6 September and 23 August 2018

Analysis method:

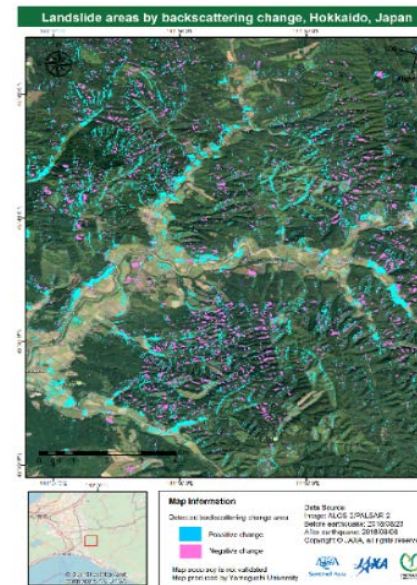

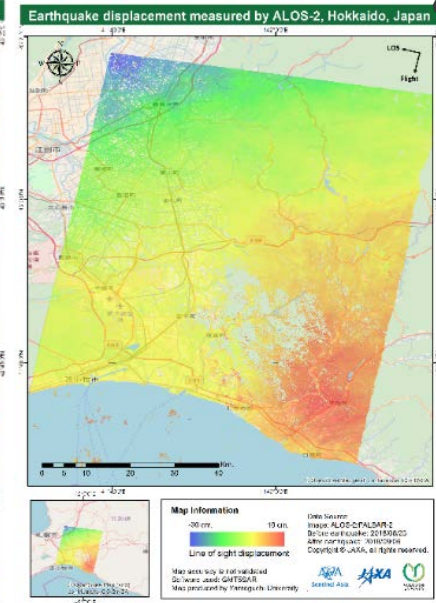

- Before and after-images color composite
- Differential SAR interferometry (DInSAR)
- Backscattering change detection

Original ALOS-2 L1.5 Fastest analysis

Filtered Sigma 0 from ALOS-2 L1.1

Earthquake and tsunami in Palu, Indonesia

Occurrence date: 28 September 2018

Information: M7.5, induce tsunami and liquefaction

Input data:

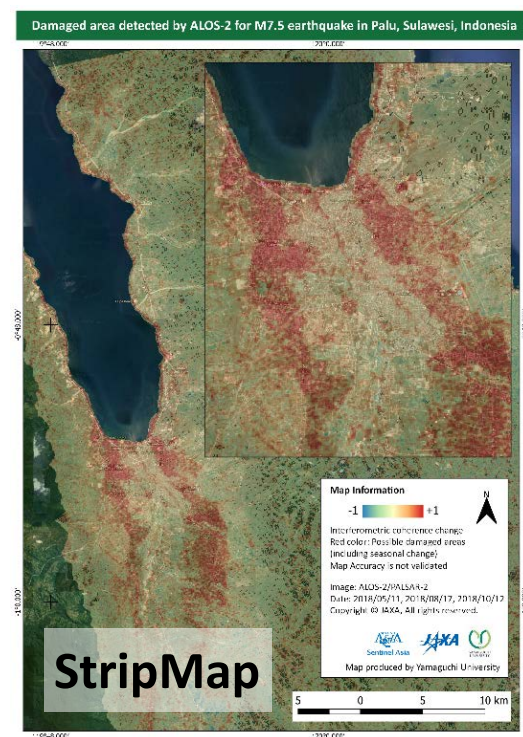

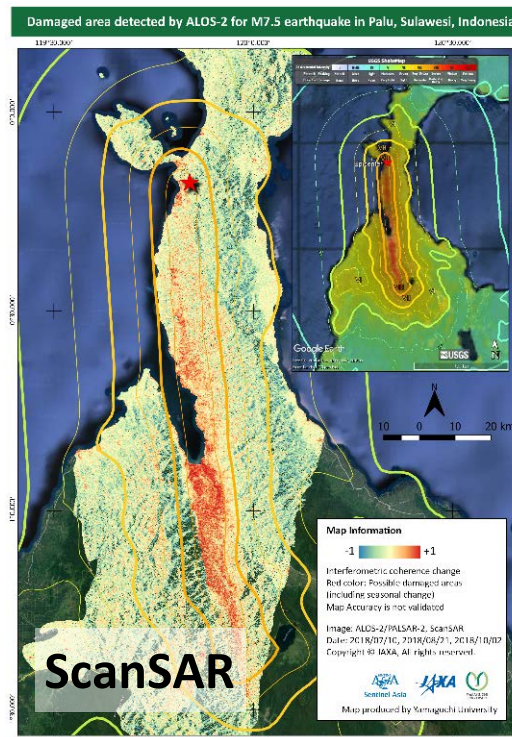

ALOS-2 StripMap on 2018/10/01

ALOS-2 SCANSAR on 2018/10/02, 2018/08/21, 2018/07/10

ALOS-2 StripMap on 2018/10/12, 2018/08/17, 2018/05/11

Analysis method:

- Change of backscattering pattern
- Differential SAR interferometry (DInSAR)
- Interferometric coherence change

ALOS-2

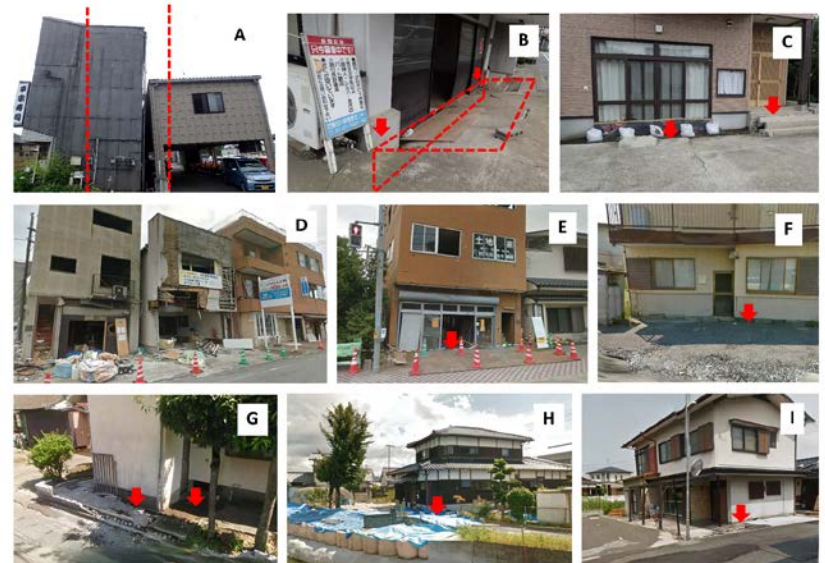

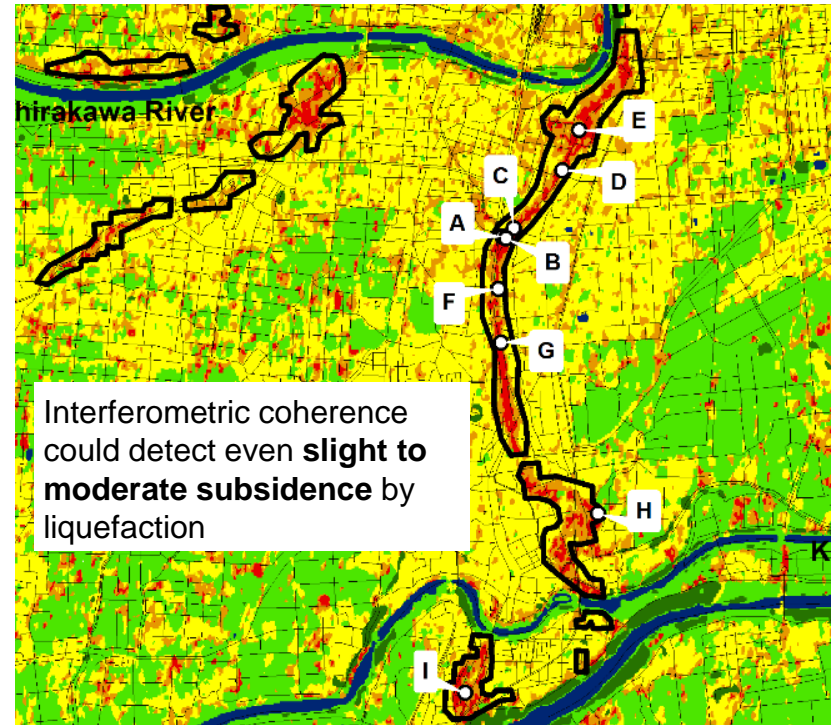

Sentinel-2

Learn from Kumamoto earthquake 2016

Coherence change technique could detect slight to moderate damage that can not see from optical sensor. However, we can just presents as the change of physical surface properties for emergency mapping.
